Summary

I provide technical leadership to an engineering team in the domain of supply chain risk analysis within Intertek's Kanata office which enables the Global Restricted Substances (GRS) group. I have built solutions for Business process automation, data pipelines, web-based tools for supply chain risk assessment, and scraping web repositories to obtain research data I interpret the results of the findings and communicate directly to stakeholders — customers, my internal organization, and the public.

Technical Skills

Technologies: Python (Pandas, Requests, ScikitLearn, NumPy, Flask), SQL, Java, Javascript, R, Jupyter Notebooks

Applications: Data pipelines and ETL, Web scraping, Machine learning, Natural language processing, Web apps, Mathematical and Statistical models, Business-domain research

Professional Experience

Intertek

GLOBAL RESTRICTED SUBSTANCES — OTTAWA, CANADA

Engineer

October 2009 – present

Intertek is a global auditing, testing, and certification service provider. Designed and implemented a configurable risk analysis platform for worldwide chemical regulatory compliance. Mine and analyze data to keep up to date on enforcement and risk trends. Automate business processes. Mentor junior team members.

Ageus Solutions

OTTAWA, CANADA

Engineer

January 2005 – October 2009

Ageus Solutions was a successful independent consulting startup which was integrated into Intertek Health and Environmental after acquisition. One of the founders of the company. Served on board of Directors and as a corporate officer. Responsible for legal due diligence during M&A. Designed core analytical services and directed team of regulatory researchers.

Nortel Networks

OPTICAL COMPONENTS — OTTAWA, CANADA

IC Designer

June 2000 – December 2004

The former Nortel Optical Components Group designed and fabricated GaAs ICs for use in optical long haul equipment. Analyzed integrated circuits and discrete semiconductor devices for root-cause of failure. Assembled and ran laboratory at minimal cost during downsizing. Experimentally demonstrated recurring failure mechanisms. Advised manufacturing operations to implement corrective action.

Education

Carleton University

OTTAWA, CANADA

Bachelor of Computer Science, Honors

2018

With High Distinction. Data management, AI, and software engineering. Web and mobile application development. Computer Vision. Awarded Senate Medal for Outstanding Academic Achievement

University of Manitoba

WINNIPEG, CANADA

B.Sc. (Electrical Engineering)

1999

Focused on microelectronics and VLSI design. Acquired proficiency in IC design tools, statistics and mathematics, MATLAB, and C++.

Udacity

Data Scientist Nanodegree

Pending

CRISP-DM Process, Supervised learning, Unsupervised Learning, Deep Learning, Stakeholder Communication, Experimental Design, Software Engineering, ETL Pipelines, NLP Pipelines

Professional Projects

Risk Analysis Application

Purpose: Analyze a client's supply chain for material risks. Machine learning algorithm determines the types of materials based on text. Renders a tabular report with recommended testing plan or design revisions, to assist a material science SME. For a complex product, this allows a client to apply chemical testing in a cost-effective manner.

Results: Reduced a multi-week engineering workflow to hours. XXX successful customer-projects to date.

Technology: Python, SQL, Javascript

Material Risk Knowledge Base

Purpose: Periodically mines product recall and litigation repositories to obtain up-to-date chemical infraction data set. Cleans and transforms raw HTML and XML, processes free text, and stores results in SQL repository.

Results: Intertek maintains an industry-leading knowledge base on exactly what regulated chemicals are used, and in what types of products.

Technology: Python (Pandas, Requests, NLTK), Java, SQL

ETL Pipelines

Purpose: Automates customers' product design encodings and results of conformity assessments from various sources. Maps schemas, cleans data, stores in engineering SQL database

Results: Intertek is able to accept product conformity data from in-house sources, third-party service providers, or customers, and deliver a consistent, repeatable analysis product.

Technology: Python, SQL

Academic Projects

Value-Investor Stock Analyzer

Purpose: Stock-market algorithms are ubiquitous, but I built this tool to apply Benjamin Graham/Warren Buffet Style fundamentals analysis at a time when "value investing" was out of style. It is essentially a regression learner which trains on fundamentals, predicting opportunity five-year returns. It uses the Shiny framework to provide the user with a convenient web UI.

Results: Beat the TSX very nicely.

Technology: R, SQL, Javascript

Carleton University Honors Project

Purpose: Uses Natural Language Processing to extract product structure and composition from free text obtained from industrial designs. Implemented in C++.

Results: Portions of this academic project were found to be suitable for deployment in an industrial setting (I donated them to Intertek's Risk Analysis Application). It also received a grade of A+.

Technology: C++, Machine Learning, Natural Language Processing, NLTK API (As part of the academic requirement, I wrote the NLP from scratch in C++)

Udacity Deep-Learning Project

Purpose: Classify the Oxford "Flowers" dataset by species using a convolutional neural network

Results: TBD

Technology: Pytorch, Deep neural networks, Computer vision

Udacity NLP Pipeline

Purpose: TBD

Results: TBD

Technology: Technology: NLTK

Udacity Supervised Learning Project

Purpose: Evaluated Random Forest, Adaboost, Bayesian Classifiers in Scikitlearn using the California Census dataset. Obtained metrics ;verify;

Results: TBD

Technology: Python and Jupyter
